Subject Index

Air conditioner
effect of improper refrigerant charging on the performance of an, with capillary tube expansion, 363
Air flow
buoyancy-driven, in a stairwell model with through-flow, 133
Airflow computations
methodology for indoor, and energy analysis for a displacement ventilation system, 259
Airflow studies
room, scale effect in, 207
Air quality
perceived indoor, effect of ventilation and air pollution on, in five town halls, 175
Air humidity
indoor, simulation of, using control volume heat and moisture balance method, 373
Air permeability
measurements of, in multizone buildings, 103
Air temperature variations
urban, prediction of, using the analytical CTTC model, 313
Audits
energy, a detailed comparison of, carried out by four separate companies on the same set of buildings, 153

Boilers
condensing, experimental evaluation of seasonal efficiency of, 237
Boric acid
permanency of, used as a fire retardant in cellulosic insulation, 351
BRIS simulation program
for thermal design of buildings and their services, 385
Building envelopes
U.S.S.R. experience in thermal design of, with improved thermal properties, 31

Climate
cold, thermal performance of four sunspaces in a, 273
Climatic impacts
of urban design features for high- and mid-latitude cities, 325
Codes
methodology and principles involved in the setting of, on building heat engineering in the U.S.S.R., 401
Comfort
and energy consumption analysis in buildings with radiant panels, 287
Condensation
interstitial, and vapour permeability of building materials, 193
Condensing boilers
experimental evaluation of seasonal efficiency of, 237
Consumption
fuel, analysis of, in a building estate, 243
Control method
new air-conditioning environmental, 183
Cooling load calculation
some new aspects concerning, referring to recent works for VDI 2078 in Germany, 189
CTTC model
analytical, prediction of urban air temperature variations using the, 313

Degree-days
method for calculating, to any base temperature, 299
Design
of energy-efficient residential building in transition zone of China, 225
street, and urban canyon solar access, 117
thermal, BRIS simulation program for, of buildings and their services, 385
thermal, U.S.S.R. experience in, of building envelopes with improved thermal properties, 31
Design features
urban, climatic impacts of, for high- and mid-latitude cities, 325
Design principles
and measured performance: analysis of a commercial ice-storage system, 337
Design stage
sketch, a tool for predicting hourly air temperatures and sensible energy loads in buildings at, 61

Efficiency
seasonal, experimental evaluation of, of condensing boilers, 237
Enclosing structures
with thermal bridges, results of comparing solutions of calculation problems of, by Soviet and American methods, 303
Energy analysis
methodology for indoor airflow computations and, for a displacement ventilation system, 259
Energy audits
detailed comparison of, carried out by four separate companies on the same set of buildings, 153
Energy balance model
an improvement to the basic, for urban thermal environment analysis, 143
Energy buildings
low, operating experience of, in the United Kingdom, 231

Elsevier Sequoia/Printed in The Netherlands

Energy consumption analysis
and comfort in buildings with radiant panels, 287
Energy Cost Index
Milton Keynes, 83
Energy loads
sensible, a tool for predicting hourly air temperatures and, in buildings at sketch design stage, 61
Energy performance
experimental analysis of the, of an attached sunspace, 221
Energy saving
main trends in, in buildings — theory and practice in the U.S.S.R., 43
Energy-efficient residential building
design of, in transition zone of China, 225
Energy-sustainable world
the way to the, 249
Environment
combined, quantification of the synthesized evaluation of, 169
Environment analysis
urban thermal, an improvement to the basic energy balance model for, 143
Environmental control method
a new air-conditioning, 183

Fire retardant
permanency of boric acid used as a, in cellulosic insulation, 351
Fireplace
open, ventilation perturbations due to an, in a house, 211
Floors
experimental ventilated cavity, contribution to thermal comfort given by, 197
Fuel consumption
analysis of, in a building estate, 243

Heat-engineering
building, methodology and principles involved in the setting of codes on, in the U.S.S.R., 401

Ice-storage system
analysis of a commercial: design principles and measured performance, 337
Insulation
cellulosic, permanency of boric acid used as a fire retardant in, 351
Interstitial condensation
and vapour permeability of building materials, 193

Leaf cover
thermal improvement by means of, on external walls — a simulation model, 19
Life-cycle cost minimization
considering retrofits in multi-family residences, 9
Low energy buildings
operating experience of, in the United Kingdom, 231

Moisture balance method
simulation of indoor air humidity using control volume heat and, 373

Operating experience
of low-energy buildings in the United Kingdom, 231

Passive solar rooms
computer simulation of an optimal stochastic controller applied to, 1
Pollution
air, effect of ventilation and, on perceived indoor air quality in five town halls, 175

Radiant panels
comfort and energy consumption in buildings with, 287
Refrigerant charging
effect of improper, on the performance of an air conditioner with capillary tube expansion, 363
Retrofits
life-cycle cost minimization considering, in multi-family residences, 9

Scale effect
in room airflow studies, 207
Simulation
computer, of an optimal stochastic controller applied to passive solar rooms, 1
of indoor air humidity using control volume heat and moisture balance method, 373
of ventilation strategies of a residential building in hot arid regions or Iran, 201
Simulation model
thermal improvement by means of leaf cover on external walls, 19
Simulation program
BRIS, for thermal design of buildings and their services, 385
Solar access
urban canyon, and street design, 117
Stair-well model
buoyancy-driven air flow in a, with through-flow, 133
Street design
and urban canyon solar access, 117
Sunspace(s)
attached, experimental analysis of the energy performance of an, 221
thermal performance of four, in a cold climate, 273
Synthesized evaluation
quantification of, of the combined environment, 169

Temperatures
hourly air, a tool for predicting, and sensible energy loads in buildings at sketch design stage, 61
Thermal bridges
results of comparing solutions of calculation problems of enclosing structures with, by Soviet and American methods, 303
Thermal comfort
contribution to, given by experimental ventilated cavity floors, 197
Thermal design
U.S.S.R. experience in, of building envelopes with improved thermal properties, 31

Thermal environment analysis
urban, an improvement to the basic energy balance model for, 143
Thermal improvement
by means of leaf cover on external walls — a simulation model, 19
Thermal performance
effect of vertical location on, of multistorey apartments in Riyadh, Saudi Arabia, 51
of four sunspaces in a cold climate, 273

Urban air temperature variations
prediction of, using the analytical CTTC model, 313
Urban canyon
solar access and street design, 117
Urban design features
climatic impacts of, for high- and mid-latitude cities, 325

VDI 2078
some new aspects concerning cooling load calculation referring to recent works for, in Germany, 189
Ventilation
effect of, and air pollution on perceived indoor air quality in five town halls, 175
of welding halls, 215
Ventilated cavity floors
contribution to thermal comfort given by experimental, 197
Ventilation perturbations
due to an open fireplace in a house, 211
Ventilation strategies
simulation of, of a residential building in hot arid regions of Iran, 201
Ventilation system
displacement, a methodology for indoor airflow computations and energy analysis for a, 259
Vertical location
effect of, on thermal performance of multistorey apartments in Riyadh, Saudi Arabia, 51

Welding halls
ventilation of, 215
